

## SyncEx Collaboration Suite For Microsoft Exchange, v1.0

Suite of Standards [JSR 168]-Compliant portlets for your portal

Organizations are rapidly moving business online through business portals that address customer self-service and support, targeted marketing and sales, employee productivity, channel optimization, and supplier interaction. This excels the need and power of collaboration to business portal.

### Overview

Groupware and collaboration systems contain years of mission-critical data and information about customers, products and more that must be incorporated into enterprise application if they are to be truly useful resources for streamlining communication, cutting costs, and increasing revenue.

Business portals need to use groupware and Personal/Enterprise Information system for information and communication. YASH has brought SyncEx, a next generation collaboration for your business portals to speed up the process of communication and information sharing across the globe.

SyncEx Collaboration Suite for Microsoft Exchange from Yash Technologies, Inc. extends your portal Server's collaboration and community-building functions by giving users access to their Microsoft Exchange tools (mail, appointments, contacts, tasks) from a series of pre-built, pre-tested Java Portlet Specification (JSR 168)-compliant portlets. Integration is simple and secure, giving users the same access level, familiar interface and feature set they'd get from the full Exchange client software. Administrators can run these portlets out-of-the-box or customize them to meet specific requirements. Building these frequently-accessed tools into the portal desktop:

- Keeps users inside the portal
- Eliminates the need to install full clients on every desktop
- Can, if desired, give users access to the groupware functions from any browser.

### What's in SyncEx Collaboration Suite, v1.0?

SyncEx Collaboration Suite for Microsoft Exchange is a set of five collaborative and out-of-the-box portlets, which provides seamless integration with Microsoft Exchange server. These portlets are full-featured collaborative clients for your portal and can be accessed from anywhere that makes corporate Email, Calendar, Task and Contacts globally accessible.

- SyncX Mail Portlet, v1.0
- SyncX Task Portlet, v1.0
- SyncX Contact Portlet, v1.0
- SyncX Calendar Portlet, v1.0
- SyncX Today Portlet, v1.0

### Highlights

- ✓ Centre of Excellence - IBM, BEA, Oracle, Sun, Vignette, eXo, Liferay, JetSpeed, JBoss, uPortal, Tibco
- ✓ Standards [JSR 168]-Compliant portlets for your portal
- ✓ Full-featured access to mail, calendar, address book, tasks and alerts
- ✓ Native SSO and Proxy configuration support
- ✓ Portlets can run unaltered or can be customized (if needed)

SyncEx brings high-value solutions to help organizations not only optimize their business and enhance productivity but also distinguish themselves from the competition.

## Composite Applications/SOA

The portlets access Microsoft Exchange via the SyncEx Connector API, which ensures a scalable, reliable, secure connection between Microsoft Exchange and portal server to mail, global address lists, appointments, tasks, contacts, and folders. It also allows administrators or developers to extract Microsoft Exchange data for use in collaborative or composite applications delivered through the portal.

For example, developers can access the Microsoft Exchange contacts list to populate the user list for a new application or business process, allowing a company to maintain one central address book. Portal administrators can also consolidate individual calendars into a workgroup (or companywide) calendar or scheduling tool.

## Benefits

As workers become more mobile and workgroups expand beyond the company's borders (to include customers, suppliers and partners), groupware functions like those found in portal server and Microsoft Exchange allow people to stay connected, keeping projects on track and increasing productivity.

Using groupware data and resources in new applications and business processes speeds time to deployment and streamlines IT resources (e.g. contact lists, calendars), reducing redundancy and increasing efficiency.

- Provides more aggressive cost benefits as users can minimize the infrastructure by opting for any of the listed portal server with Microsoft Exchange to enjoy the collaboration features.
- Maintains the similar look and feel with other SyncEx Products. As a result provide an easy migration path in case of increase in the number of users or infrastructure size.
- All the Portlets from the suite work independent of others thus providing flexibility to utilize them in different applications as needed.
- Maximum ROI by lowering investment and achieving high results.

## Feature Set: SyncEx Collaboration Suite For Microsoft Exchange,

SyncEx Collaboration Suite for Microsoft Exchange is comprised of mail, calendar, address book and task portlets that may be purchased individually or as a group. Fully JSR 168 compliant, the portlets can be deployed as is, customized to meet specific business requirements or modified (position, size, color) using portal server's administrative tools.
